

# Digital and analogue tachograph analysis

providing a comprehensive solution for the management of: analogue and digital tachograph analysis, hours law legislation compliance, working time directive compliance.

# What is Tachograph Analysis Service?

- The market leading Internet based analysis service for the Transport Industry.
- 100% compatible with both analogue and digital tachographs.
- Provides you with the best tools available to help you to manage your drivers' working time, and ensure that your fleet is always compliant with hours' law and WTD legislation.

**Tachograph Analysis Service** provides targeted analysis and reports for key personnel at every level of the organisation. These reports can be presented both numerically and graphically, and include:

- Infringement summary reports
- Hours' Law analysis reports
- Depot comparison reports
- Chart submission reports
- Vehicle continuity reports
- Trend analysis and productivity reports
- Exception reports
- Bespoke reports can be created to match your exact requirements

## Key benefits

Seamless transition to digital **Tachograph Analysis Service** offers an unrivalled means of moving smoothly between the old analogue and the new digital tachographs. Because the service can handle information from both paper-based tachographs and digital tachograph smartcards, it eliminates any operational and management concerns associated with the move into the digital era.

### Legislation compliance

**Tachograph Analysis Service** makes a direct contribution towards meeting the increasing and changing legal and regulatory obligations, including compliance with:

- HGV Drivers Hours Law
- Domestic Drivers Hours Law
- Working Time Directive
- PCV Drivers Hours Law
- Operational process streamlining

### Suits operations of all sizes 'one size fits all'

**Tachograph Analysis Service** is equally suitable for small, single-site operations, through to large multinational organisations spanning many geographic locations.

### Universal and immediate accessibility

Because the **Tachograph Analysis Service** is Internet-based, with access available to all relevant and approved personnel, the data contained can be utilised at any time and from any location. This means delays in waiting for reports to be analysed and returned have become a thing of the past, allowing for instant centralised management of drivers, vehicles and tachograph data.

### High levels of security

Internet only access with strict password and accessibility controls means that all tachograph information is held in an extremely safe, secure and centralised environment. All data is securely stored and backed-up.

## Digital Tachograph

### Key features

The following features mean that **Tachograph Analysis Service** is the best choice for your fleet:

- Central management of analogue and digital data
- Drivers can send data from any company location
- Reading driver cards is extremely simple - no computer skills required
- Instant summary of driver activities in the depot
- Real-time analysis and reporting of digital data
- Capture and secure storage of data from smartcards
- Capture and secure storage of data from Vehicle Unit
- Retrieve original digital data
- Analogue and digital data automatically combined

### What you need for the Digital Tachograph

**Tachograph Analysis Service** requires minimal IT investment. You will typically need for each location using digital tachographs:

- smartcard reader
- vehicle unit download device
- Internet-enabled computer running Windows 2000, Windows XP or newer
- The **Tachograph Analysis Service** Downloader software

We will be happy to discuss these requirements with you in more detail.

## What it costs

There are no upfront costs to use **Tachograph Analysis Service** is operated on a 'pay-as-you-go' basis. No significant investments in IT hardware or software are required.

Driver inserts Smartcard into Digital Tachograph in vehicle cab.

Driver periodically inserts driver smartcard into card reader and information is downloaded.

Information is transferred to **Tachograph Analysis Service** and then processed.

**Tachograph Analysis Service** processes information and shows results.

Reports can be accessed via the internet and by email.
